

Press Release 09 / 03 / 2010

### **Ucamco latest Integr8tor release – new visuals deliver faster PCB quotations**

Integr8tor is an innovative solution for generating faster and more accurate quotations and cutting CAM time. Integr8tor inputs and analyses a job in minutes and outputs a detailed custom report for costing and planning.

Ucamco are working continuously to ensure that it integrates easily into any existing front-end environment. Today most inquiries come as emails so Integr8tor Version 4.3.1 accepts direct e-mail entry. The user can set more design characteristics to be analysed and reported. Closer integration with Frontline's Genesis front-end engineering software makes Integr8tor v4.3.1 a natural partner in a Genesis environment.

Karel Tavernier, Ucamco's Managing Director, states: "Even though we see signs of recovery in the global PCB market, cash is still tight. To allow users to benefit as quickly as possible from Integr8tor, we have developed a range of payment options including rental and "Click Charge" where the user pays per layer processed. Combined with comprehensive installation and free trial packages, these payment options will allow our customers to get the fastest return from their investment in Integr8tor v4.3.1."

"A picture is worth a thousand words". The latest release of Ucamco's Integr8tor automatic PCB data input and analysis software makes extensive use of new targeted visuals to support faster costing and planning decisions and clearer customer feedback. Where design characteristics fall outside standard capability, they are automatically highlighted. The costing engineer turns immediately to a full set of snapshots showing each of the minimum design characteristics. He gets a clear picture of each capability issue without losing time switching the job onto a CAM system or calling in the CAM department. If he needs to discuss an issue with his customer, Integr8tor provides more clear visual tools for feedback: not just the design characteristic snapshots but also real-colour pictures of the PCB.

Ucamco (former Barco ETS) is a market leader in PCB CAM software and laser photoplotting systems. We have more than 25 year continuous experience developing and supporting leading-edge front-end tooling solutions for the global PCB industry. We help fabricators world-wide raise yields, increase factory productivity, and cut enterprise risks and costs.
